

Workshop:  
Get up and  
running with  
Jenkins on  
Azure

Brian Benz

Senior Cloud  
Developer Advocate

@bbenz

# Agenda

- Introduction

- Jenkins on Azure - considerations
- Azure Ecosystem
- Azure tools and services

- Exercises

- Deploying Jenkins to Azure VMs
- Deploying Jenkins to Azure Kubernetes Service (AKS)
- Deploying Artifacts with Azure Plugins

# Deployment Choices

Four common use cases seen at customers

	Lift & Shift	Kubernetes & Containers	Cloud Native Platforms	Serverless
Definition	Traditional VM workloads. Tomcat/Spring web apps. Java EE applications. Relational databases.	Container-based deployments. Use of Netflix OSS and other related tools for service orchestration.	Cloud Foundry and OpenShift. NoSQL databases.	Event-triggered ephemeral functions with micro billing.
Partners	Red Hat, Oracle, IBM, Azul Systems, Terraform, CloudBees	Docker, CloudBees, Azul Systems, Red Hat	Pivotal, Red Hat	CloudBees, Pivotal
Common Azure Services	Azure Migrate Service, Azure VMs, Azure AD, Azure Site Recovery, Azure Database Migration Service, Azure DevTest Labs	Azure Container Service (AKS), Azure Container Instances, Azure Container Registry	Azure VMs, Azure Container Service (AKS), Azure Storage, Azure AD, Azure CosmosDB	Azure Functions, Azure Logic Apps, Azure AppInsights, Azure CosmosDB
Customer Cases	Stanley Healthcare, RCS Italy, Daimler	JB Hunt	Ford, Manulife, Merrill, Mastercard	<i>Large restaurant company</i>

# Open Source tools and APIs for Infrastructure on Azure

	Development	DevOps	Monitoring	Networking	Storage	Security
Take advantage of services and tools in the Kubernetes ecosystem	 	 <b>Jenkins</b>  <b>Terraform</b>    <b>CODESHIP</b>	 <b>Prometheus</b>  <b>fluentd</b>  <b>Grafana</b>    <b>JAEGER</b>	 	 	 <b>Twistlock</b>  <b>aqua</b>  <b>heptio</b>  <b>HASHICORP</b>  RBAC
OR, Leverage growing Azure support	 VS Code	 VSTS  ARM	 Azure Monitor	 Azure VNET	 Azure Storage	 Azure Container Registry  AAD  Key Vault

# Jenkins Plugins

## Jenkins Agent Plugin for Azure

- Deploy Azure Agents on AKS, VMs
- Windows or Linux

## Azure Artifact delivery plugins

Easily deploy artifacts to Azure

Azure Storage plugin for Jenkins

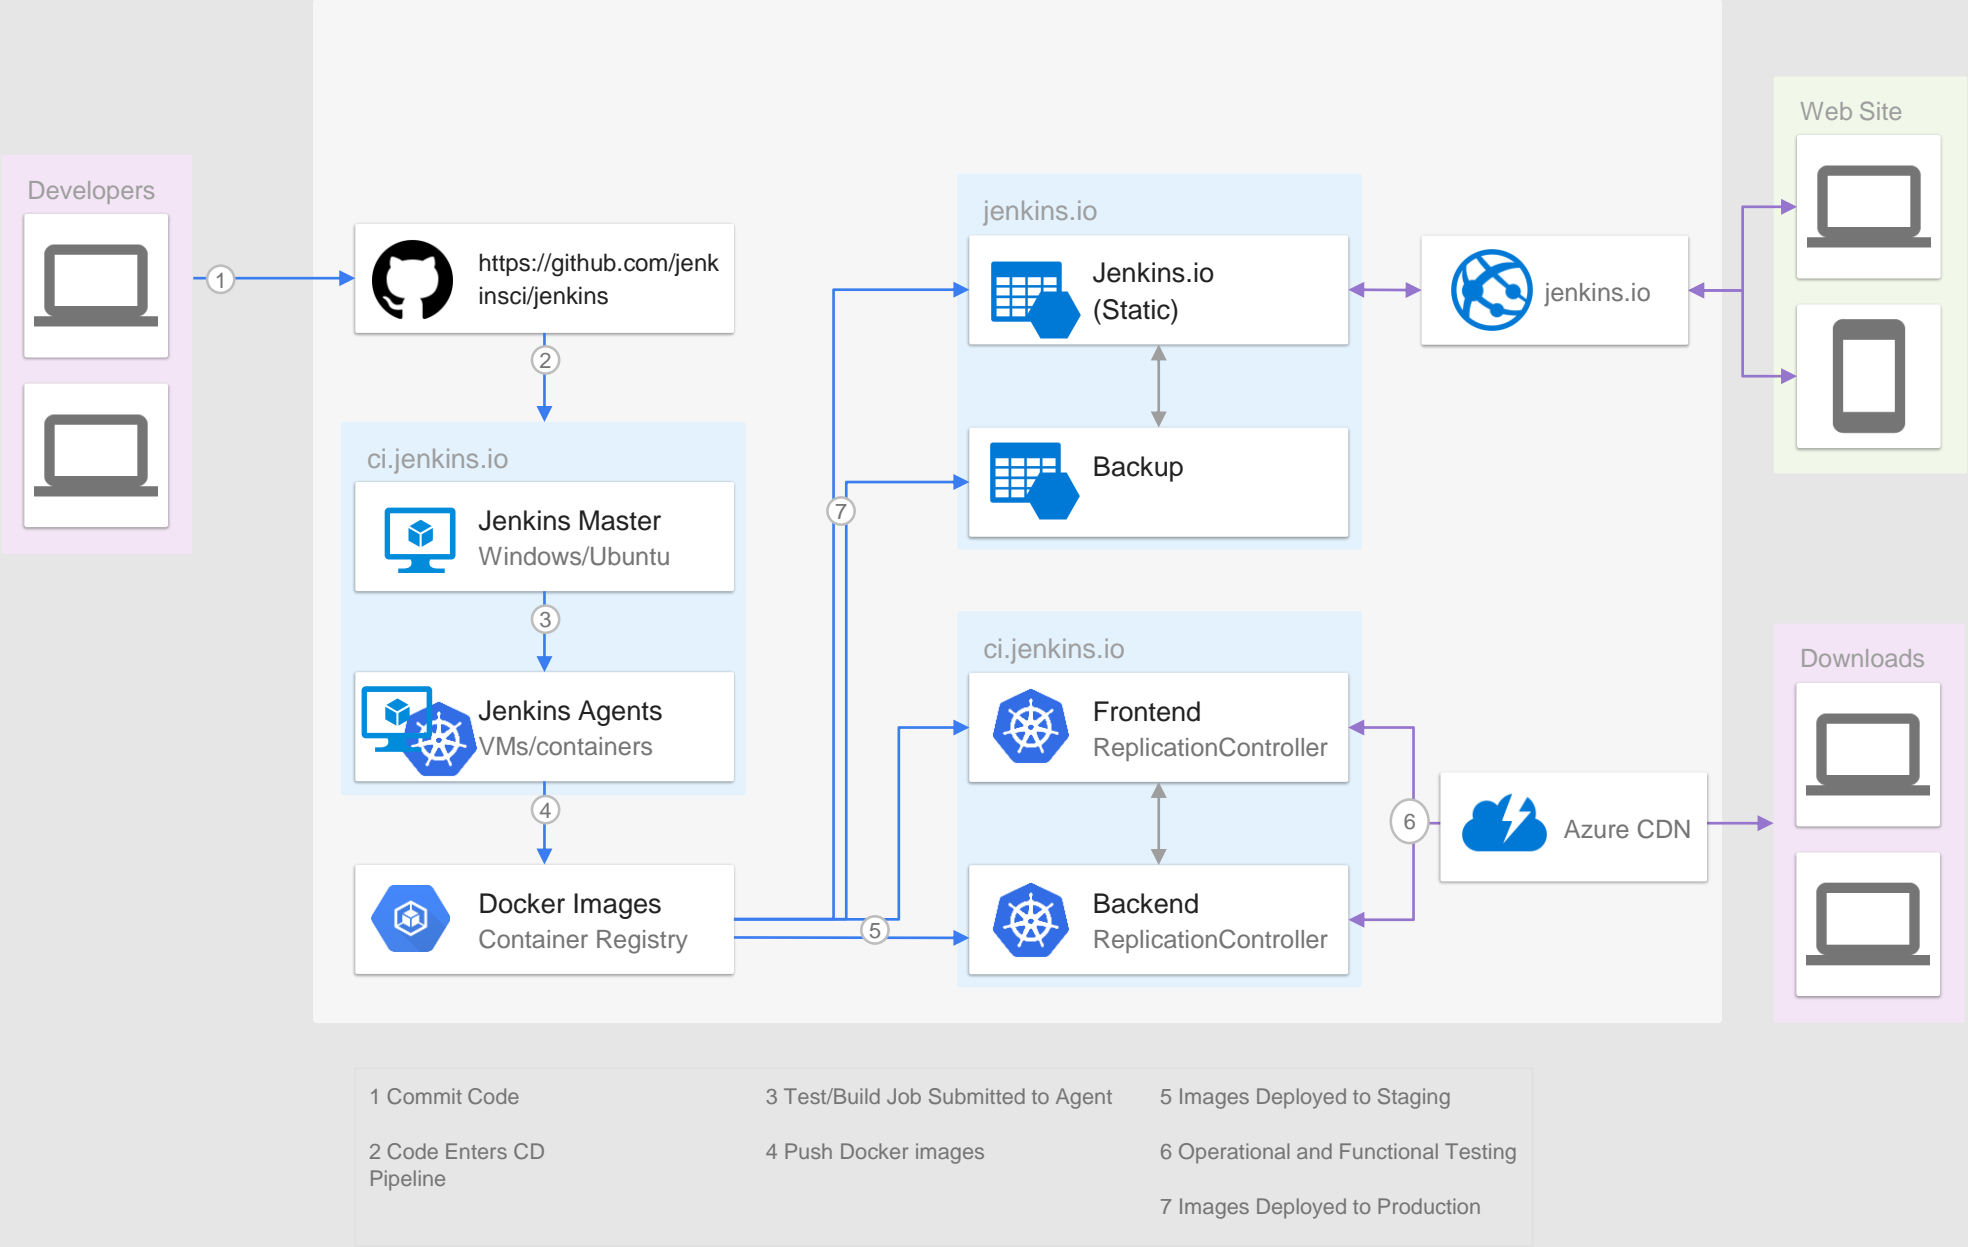

Azure AKS plugin

Azure VM plugin

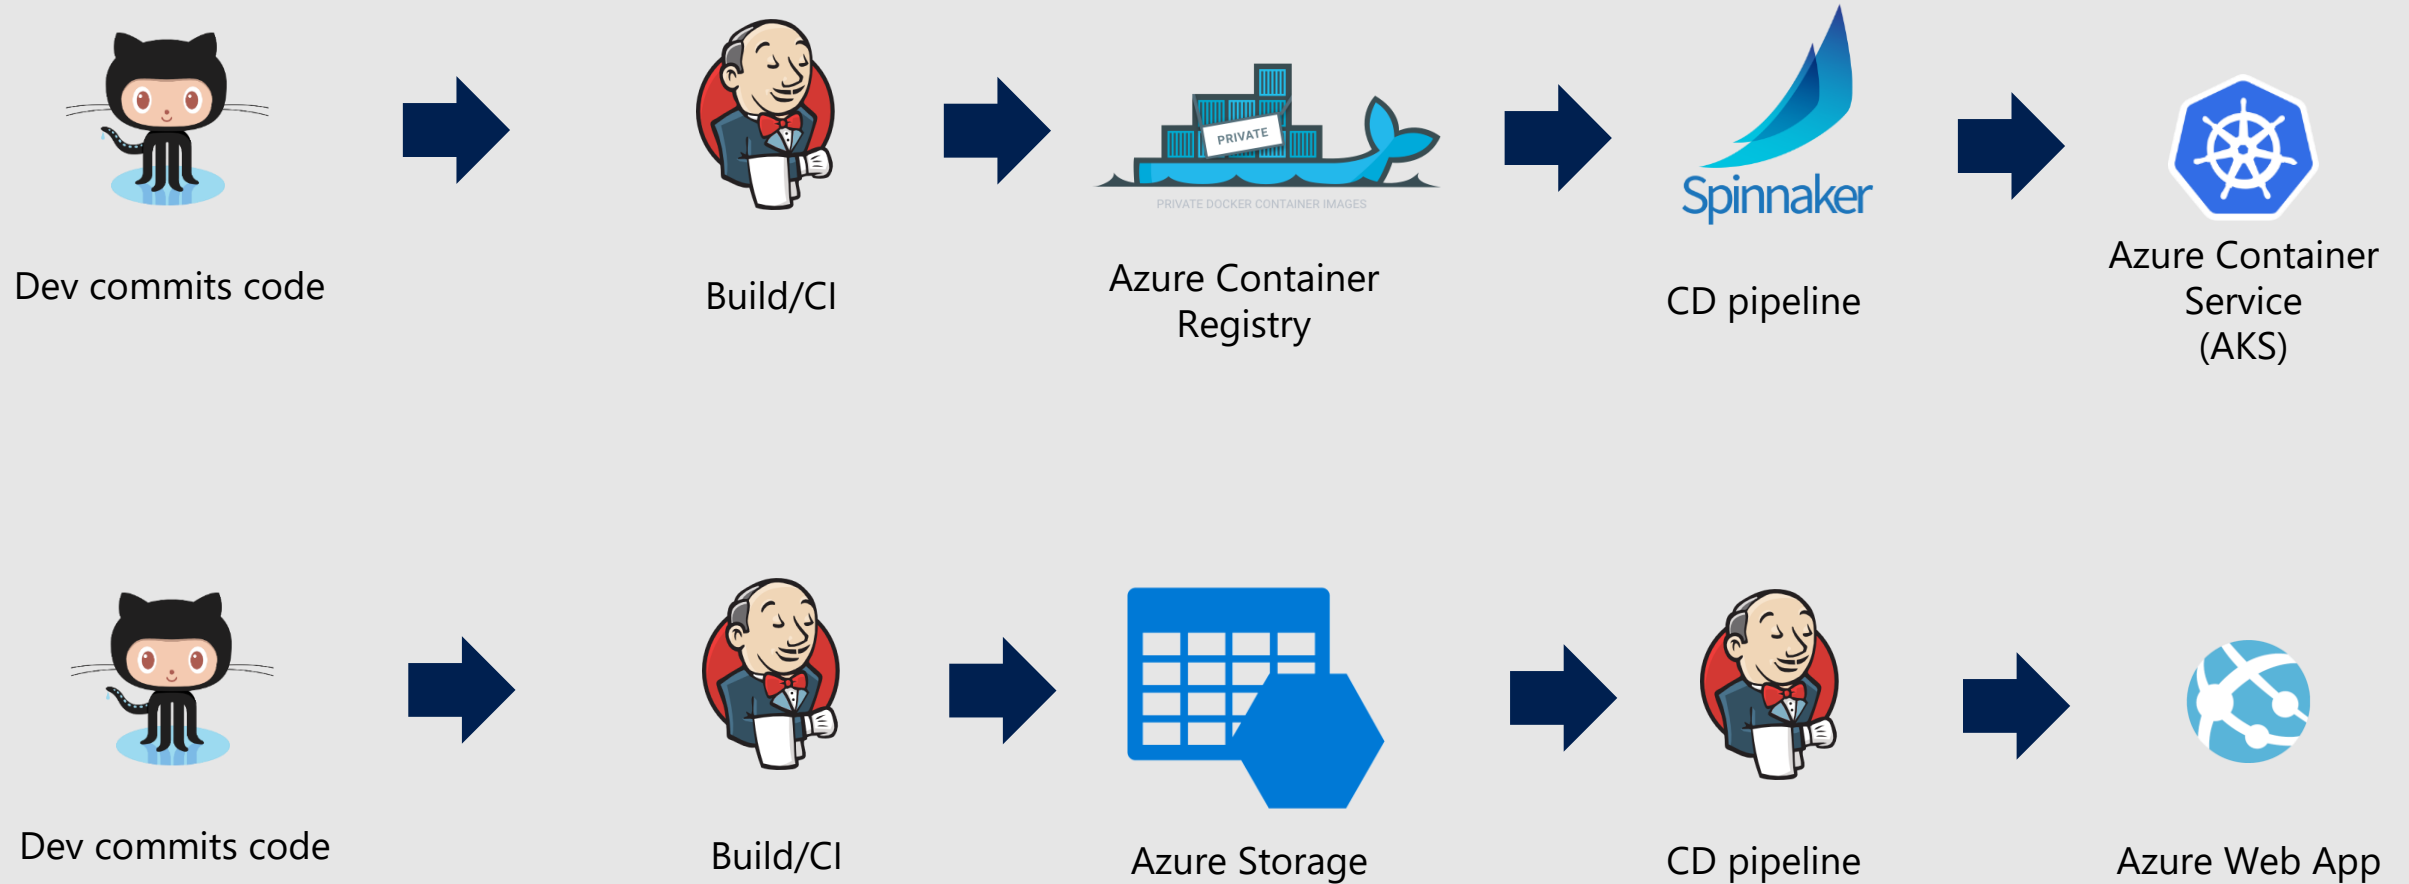

Azure ACI plugin

Dev Test > Jenkins on kubernetes

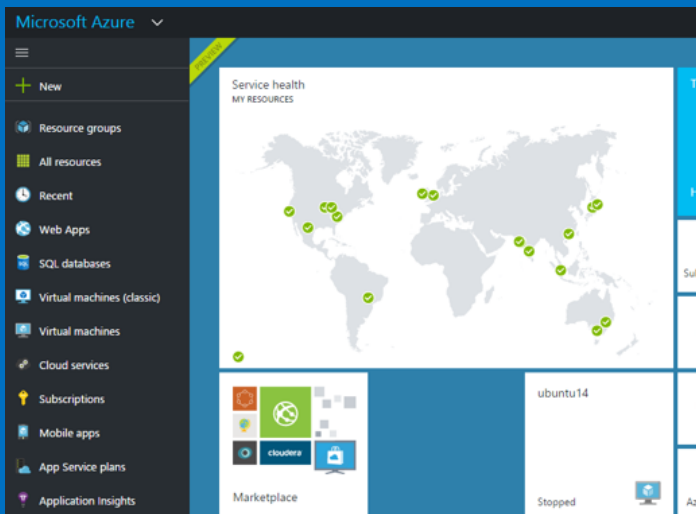

# Sample Java CI Pipelines in Azure

# Provisioning

## Portal

## CLI

## Templates and Terraform

# Azure Quickstart Templates

- Azure Resource Manager
- Community contributions
- JSON-based
- Enabled via the Azure portal
- Jenkins on VMs, AKS and Azure App Service

## DevopsTools-Jenkins-ChefHabitat-Terraform

This Quickstart program uses DevOps tools like Jenkins, Terraform, Packer and ChefHabitat. Java App is built from Chef Habitat and deployed using Jenkins Job

## Jenkins on Azure (password)

This template allows you to deploy a secure Jenkins instance on a DS1\_v2 size Linux Ubuntu 14.04 LTS VM.

by [Azure DevOps](#),  
Last updated: 6/8/2018

## Jenkins to Azure Container Registry

This template allows you to deploy an instance of Jenkins on a DS1\_v2 size Linux Ubuntu 14.04 LTS VM and an Azure

## Jenkins on Azure (SSH key)

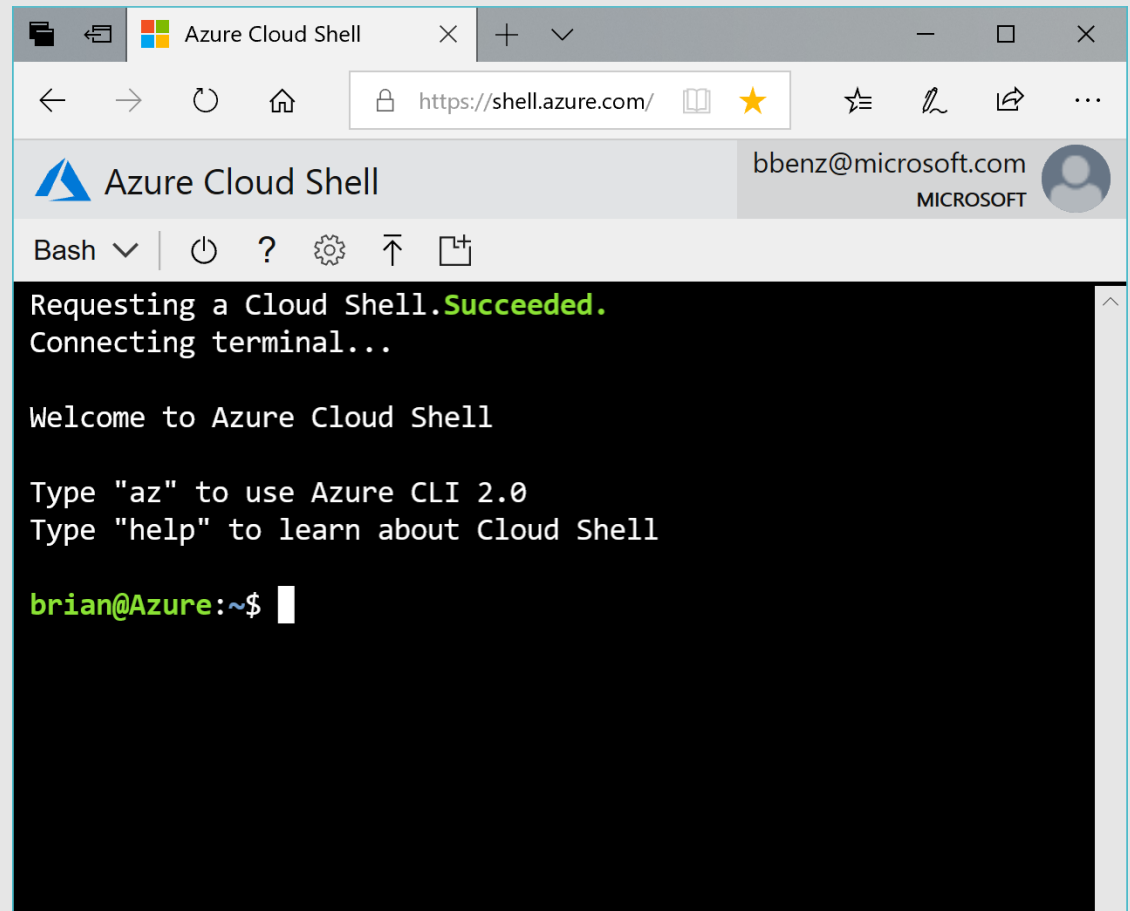

This template allows you to deploy a secure Jenkins instance on a DS1\_v2 size Linux Ubuntu 14.04 LTS VM using an SSH public

## Continuous Deployment to VM Scale Sets with Jenkins and Spinnaker

This template allows you to deploy and configure a DevOps pipeline from an Aptly repository to a VM Scale Set in Azure.

# WSL for Linux, Azure CLI and the Azure Shell

- XIX/Bash Compatibility
- Extensible/Open Source
  - Python-Based, on GitHub
- Mac, Linux and Windows
- Cloud Shell in the portal
- shell.azure.com
- Ios, Android Apps
- VS Code
- Now in DOCS!
- Look! >>>>>>

```
Azure CLI
```

```
az group create --name myResourceGroup --location westeurope
```

# Deploying Jenkins on Azure VMs

# VM Scale Sets

Flexible infrastructure at scale

Dynamically scale # of VMs with auto-scale rules

Roll out VM image updates without downtime

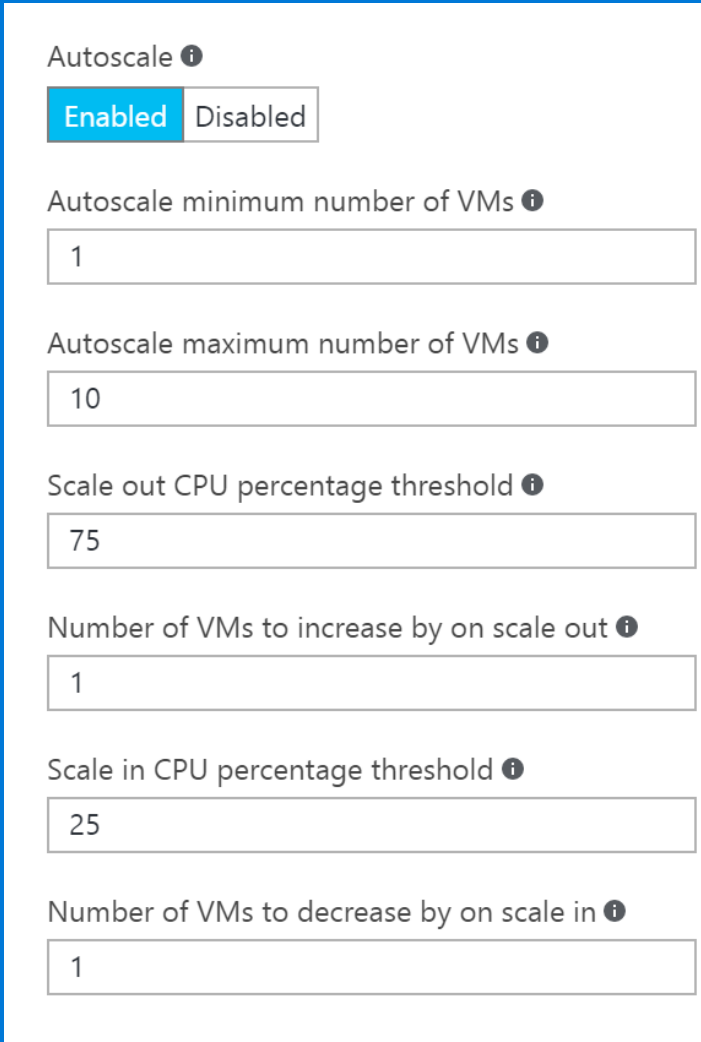

Portal, API and CLI support

# Auto-Scale Rules for VM Scale-sets

## Azure Management Portal

The screenshot shows the 'Autoscale' configuration page in the Azure Management Portal. At the top, there is a toggle switch labeled 'Autoscale' with an information icon, currently set to 'Enabled'. Below this are several input fields, each with a label and an information icon:

- 'Autoscale minimum number of VMs' with a value of 1.
- 'Autoscale maximum number of VMs' with a value of 10.
- 'Scale out CPU percentage threshold' with a value of 75.
- 'Number of VMs to increase by on scale out' with a value of 1.
- 'Scale in CPU percentage threshold' with a value of 25.
- 'Number of VMs to decrease by on scale in' with a value of 1.

## Advanced Rules with CLI + APIs

- Scale on a specific day
- Scale on a recurring schedule
- Scale on multiple resource metrics

## Or Enable Your Own Auto-Scale Engine

### Built-in Over-provisioning support built-in

- Enables faster, higher success, deployments

# Exercise 2

- Deploying Jenkins to Azure Kubernetes Service (AKS)

# Azure Container Technologies

Open Source  
*Docker, DC/OS, Kubernetes*

**Container Service**

Microservices platform with  
Windows and Linux\*  
Containers

**Service Fabric**

Single Container Apps

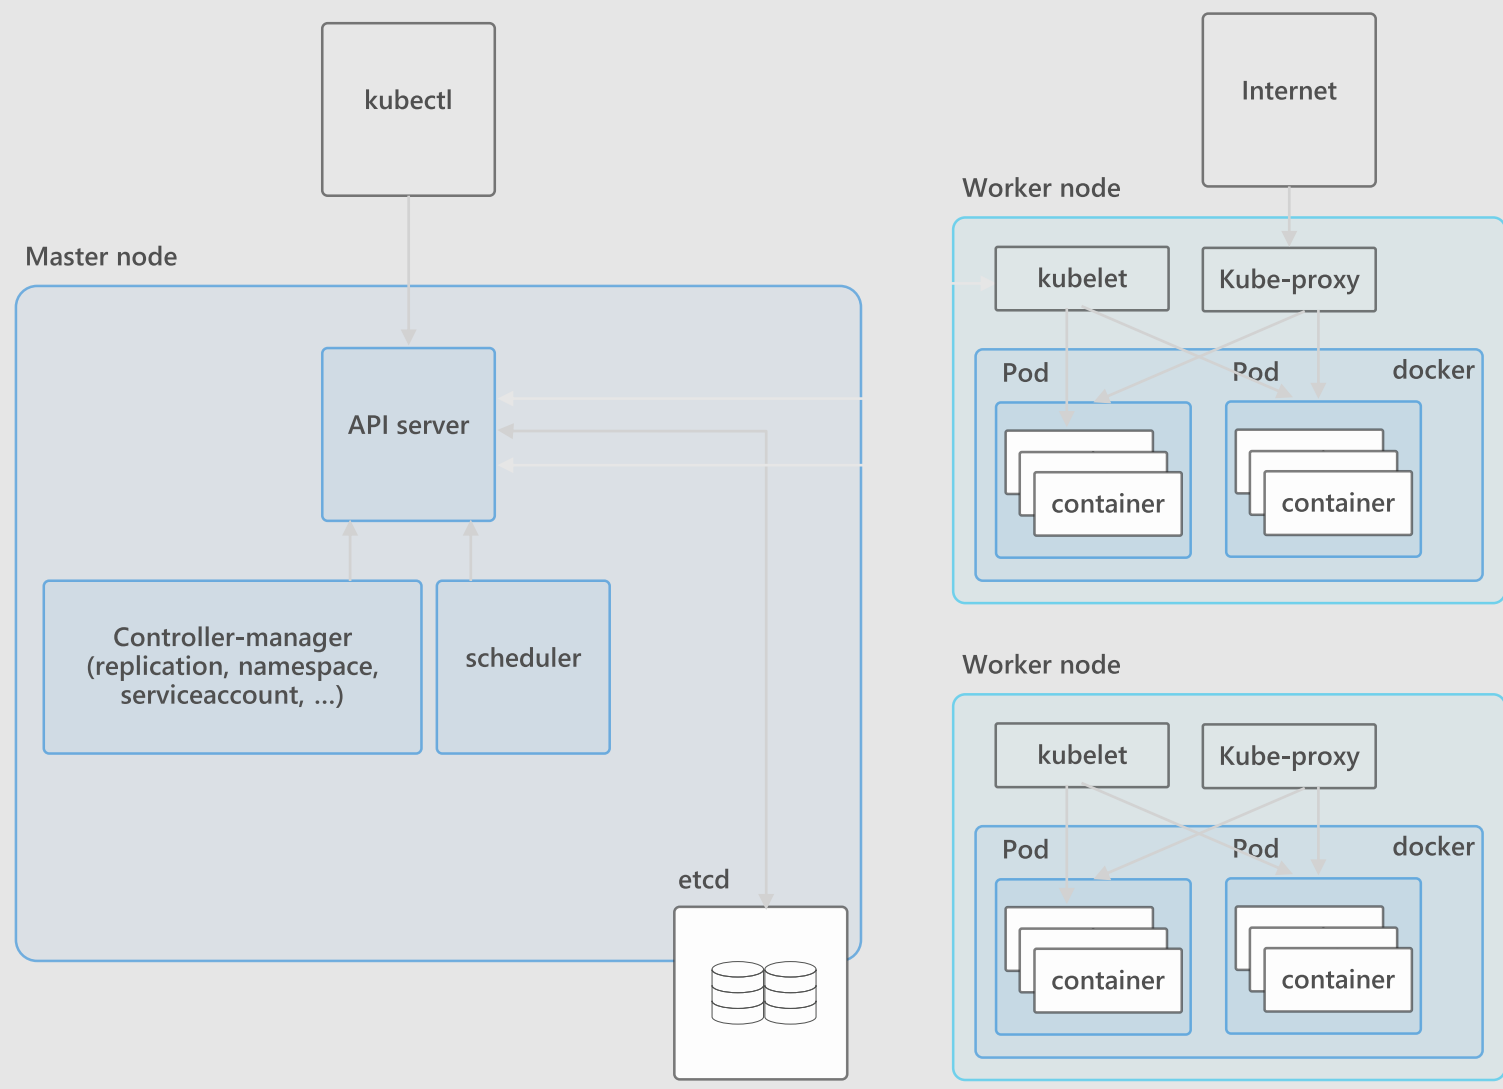

**App Service**

Infrastructure Control

Developer productivity

# Kubernetes Architecture

# Exercise 3

- Deploying Artifacts with Azure Plugins

# Azure App Service

## Build and scale cloud apps

.NET, Java, Node.js, PHP, Python

Auto patching

Auto scale

Integration with existing apps

Continuous deployment

# Azure App Service on Linux

Web Apps on Linux leverage the power of Docker containers to let you use custom containers from Azure Container Registry, Docker Hub, a private container registry, or use one of our default containers provided by App Service.

containers provided by App Service.

## Docker Container

Web Apps on Linux leverage the power of Docker containers to let you use custom containers from Azure Container Registry, Docker Hub, a private container registry, or use one of our default containers provided by App Service.

# Azure Container Registry (ACR) Build

Native Container Build Service in the cloud

Follows  **docker build** semantics

```
docker build -t helloworld:v1 .
```

```
az acr build -t helloworld{{.Build.ID}} .
```

Trigger based builds (git commits, base image updates)

```
az acr build-task create
--image          helloworld{{.Build.ID}}
--name           myBuildTask
--registry       jengademos
--context        https://github.com/me/helloworld
--branch         master
--git-access-token $PAT
```
